JAMESON ANNOUNCES PLANS TO ENTER FIBER BLOWING MARKET

Clover, South Carolina - Feb. 6, 2018 – Jameson, Spartaco company, announced it will be launching a comprehensive line of fiber blowing equipment later this Spring. Jameson and Danish equipment manufacturer Fremco have partnered to bring state-of-the-art fiber blowing equipment to the North American fiber installation market.

“Fremco is a world-class manufacturer focused exclusively on designing and manufacturing the best fiber blowing equipment available. We’re excited about the opportunity to introduce this level of quality, reliability and performance to our customers,” said Tim Beed, Spartaco Vice President of Product Development and Marketing. Kim Carlsen, Fremco Managing Director, added, “Jameson brings vast experience serving the telecommunication market; we look forward to leveraging their sales and marketing expertise as we mutually grow our business together.”

Jameson plans to introduce several fiber blowing machines covering the full range of cable installation: fiber to the home (FTTH), provider access networks and broadband back-bone installation. Fremco is well recognized in the industry for providing highly reliable fiber installation equipment that is easy to setup and efficient to operate. Jameson featured two FTTH machines (NanoFlow and MicroFlow) at the 2018 BICSI Winter Conference in Orlando, FL. Formal product launch of the full fiber blowing line is scheduled for late Spring 2018.

About Jameson – A Spartaco Company

Established in 1956, Jameson is a manufacturer and provider of quality tools and lighting solutions for professionals across a variety of markets worldwide. Jameson’s line-up of high quality, professional-grade products are utilized in lighting applications, inside wiring, underground cabling and locating, aerial cable placement, line clearance and tree trimming.
