NEW HEAVY DUTY ILLUMINATION EQUIPMENT LIGHTS ANNOUNCED

Clover, South Carolina – February 20, 2018 – Jameson announces the introduction of Heavy Duty Illumination (HDI) LED Equipment Lights. The new HDI lights expand the line of rugged LED equipment lighting from Jameson, offering the brightness and durability required for the toughest jobs in utility, agriculture, construction, forestry, military and off-road applications.

Available in a variety of square and round housing configurations, the new HDI line consists of six different lights ranging from 6 to 22 LEDs running at 12 to 50 watts with an output of 1,260 to 5,000 lumens. Key features include rugged die-cast aluminum housings with black e-coat, automotive optical-grade polycarbonate lens and ingress protection to withstand tough environments. Each light utilizes a hybrid “spot-wide” beam pattern suitable for use in a wide variety of applications. Backed by a 3-year warranty, HDI lights provide rugged dependability.

As part of this lighting line expansion, Jameson now offers two Back-Up Alarms for use in various applications such as Utility Trucks, Service/Fleet Vehicles, Heavy Equipment, Construction Vehicles and Fork Lifts. One unit provides an audible only alarm and the other provides an audible alarm with LED strobe. Loud 97-decibel alarm provides essential notification alerting the presence of nearby work vehicles. Vehicles equipped with Back-Up alarms help reduce liability and create a safer work environment night and day.
